*An Exploration of Space 1999 Through the Lens of Fan Fiction: Forever Alpha* May 02 2020 An essential introduction to a rapidly growing field of study, AN EXPLORATION OF ?SPACE: 1999? THROUGH THE LENS OF FAN FICTION gathers in one place the complete 2015-16 Online Alpha discussion of the SPACE: 1999 fan fiction corpus, with a focus on the FOREVER ALPHA fan fiction series. Collected here are central viewpoints and arguments by Online Alpha discussants that have dominated Online Alpha debates in recent years. Editor John K. Balor provides a cogent introduction that places each piece in its historical and intellectual context, mapping the discussion and suggesting future trajectories. The book has been developed on an idealistic basis. It is sold at the lowest price the publisher was willing to accept. **The Political Necessity of Transpersonal Work** Jun 22 2019 Marcella Rowek explores the paradigm of Deep Democracy and its potential to transform polarized conflicts in the context of the current refugee situation in Europe. Her approach to peace work and research is embedded in the Innsbruck School of Peace Studies' philosophy of Transrational Peaces and Lederach's Elicitive Conflict Transformation. At the heart of a deeply democratic attitude is the idea that all perspectives, experiences, feelings, body sensations and awareness levels of the conflicting parties have to be acknowledged and consciously worked with. Only then conflict transformation processes can unfold. This is linked to a systemic and transpersonal perspective, which assumes that not a single person, event or group triggers a conflict, but that it is systemically co-created.

**Environmental Health Literacy** Mar 24 2022 This book explores various and distinct aspects of environmental health literacy (EHL) from the perspective of investigators working in this emerging field and their community partners in research. Chapters aim to distinguish EHL from health literacy and environmental health education in order to classify it as a unique field with its own purposes and outcomes. Contributions in this book represent the key aspects of communication, dissemination and implementation, and social scientific research related to environmental health sciences and the range of expertise and interest in EHL. Readers will learn about the conceptual framework and underlying philosophical tenets of EHL, and its relation to health literacy and communications research. Special attention is given to topics like dissemination and implementation of culturally relevant environmental risk messaging, and promotion of EHL through visual technologies. Authoritative entries by experts also focus on important approaches to advancing EHL through community-engaged research and by engaging teachers and students at an early age through developing innovative STEM curriculum. The significance of theater is highlighted by describing the use of an interactive theater experience as an approach that enables community residents to

express themselves in non-verbal ways.

*The Friedman Archives Guide to Sony's A9 II (B&W Edition)* Mar 12 2021 Gary Friedman is renown for ebooks that combine technical insights, remarkable thoroughness, and an easy-to-read style. In this 726-page (!) book, every feature is described in remarkable detail. (Including one I'll bet you haven't read about anywhere else.) Topics covered include: \* Gary's personal camera settings \* All of the hidden features that are NOT in the menus \* All the different ways to tether the camera, both wired and wireless \* All of the FTP options, including how you can caption, keyword, and upload everything while still in the field! \* His workflow for reducing high ISO noise using three different programs \* Untangling the alphabet soup that is video nomenclature \* How to communicate with your camera when it's off (!) *Beyond the Lens* Oct 19 2021 Created by the Association of Photographers (AOP), Beyond the Lens is the essential guide to rights, ethics and business practice in professional photography. Now in its fourth edition it has been likened to 'the bible for photographers and commissioners' and is used by colleges/universities as part of their courses and widely used by photographers and commissioners. This 4th edition of Beyond the Lens has a foreword by Terry O'Neill and is split into 3 parts: The Law and the Photographer: covers copyright, moral rights, contract law, privacy, photographing children, late payment, legal remedies for copyright infringements and unpaid debts both in the UK and EU plus legislation that photographers need to be aware of. The Business End: with advice on tax, VAT, accounting, bookkeeping, insurance, limited companies, pensions, savings, investments and mortgages, dealing with income/career problems, standards and codes, social media, agents, collecting societies and associations and unions. Making a Living: is written by photographers and covers how to be a student, working as an assisting photographer, specific area of photography from their perspective - advertising, editorial, architectural, corporate and design, stock, digital and moving image, working overseas, and shooting on the streets. An appendix includes 3 sets of photographers' terms and conditions for those based either in England & Wales, Scotland or Eire; model release form; template business forms and agents agreement. Disclaimer This book is intended as a guide for those people involved in photography and it is not intended to take the place of legal advice. The authors, publisher and consultants can take no responsibility for the consequence of any reliance placed on its contents. The editorial content of Part 3 'Making a Living' (except Chapter 8 Standards and Codes for Assisting Photographers & Chapter 9 Negotiating Licences and Usage) does not necessarily reflect the attitude of the AOP Board or the membership.

DSS 2.0 - Supporting Decision Making With New Technologies Nov 27 2019 Advances in technology have resulted in new and advanced methods to support decision-making. For example, artificial intelligence has enabled people to make better decisions through the use of Intelligent Decision Support Systems (DSS). Emerging research in DSS demonstrates that decision makers can operate in a more timely manner using real-time data, more accurately due to data mining and 'big data' methods, more strategically by considering a greater number of factors, more precisely and inclusively due to the availability of social networking data, and with a wider media reach with video and audio technology. This book presents the proceedings of the IFIP TC8/Working Group 8.3 conference held at the Université Pierre et Marie Curie in Paris, France, in June 2014. Throughout its history the conference has aimed to present the latest innovations and achievements in Decision Support Systems. This year the conference looks to the next generation with the theme of new technologies to enable DSS2.0. The topics covered include theoretical, empirical and design science research; case-based approaches in decision support systems; decision models in the real-world; healthcare information technology; decision making theory; knowledge management; knowledge and resource discovery; business intelligence; group decision support systems; collaborative decision making; analytics and 'big data'; rich language for decision support; multimedia tools for DSS; Web 2.0 systems in decision support; context-based technologies for decision making; intelligent systems and technologies in decision support; organizational decision support; research methods in DSS 2.0; mobile DSS; competing on analytics; and social media analytics. The book will be of interest to all those who develop or use Decision Support Systems. The variety of methods and applications illustrated by this international group of carefully reviewed papers should provide ideas and directions for future researchers and practitioners alike.

*MEDINFO 2019: Health and Wellbeing e-Networks for All* May 26 2022 Combining and integrating cross-institutional data remains a challenge for both researchers and those involved in patient care. Patient-generated data can contribute precious information to healthcare professionals by enabling monitoring under normal life conditions and also helping patients play a more active role in their own care. This book presents the proceedings of MEDINFO 2019, the 17th World Congress on Medical and Health Informatics, held in Lyon, France, from 25 to 30 August 2019. The theme of this year's conference was 'Health and Wellbeing: E-Networks for All', stressing the increasing importance of networks in healthcare on the one hand, and the patient-centered perspective on the other. Over 1100 manuscripts were submitted to the conference and, after a thorough review process by at least three reviewers and assessment by a scientific program committee member, 285 papers and 296 posters were accepted, together with 47 podium abstracts, 7 demonstrations, 45 panels, 21 workshops and 9 tutorials. All accepted paper and poster contributions are included in these proceedings. The papers are grouped under four thematic tracks: interpreting health and biomedical data, supporting care delivery, enabling precision medicine and public health, and the human element in medical informatics. The posters are divided into the same four groups.

The book presents an overview of state-of-the-art informatics projects from multiple regions of the world; it will be of interest to anyone working in the field of medical informatics.

**Cybercrime Through an Interdisciplinary Lens** Jun 14 2021 Research on cybercrime has been largely bifurcated, with social science and computer science researchers working with different research agendas. These fields have produced parallel scholarship to understand cybercrime offending and victimization, as well as techniques to harden systems from compromise and understand the tools used by cybercriminals. The literature developed from these two fields is diverse and informative, but until now there has been minimal interdisciplinary scholarship combining their insights in order to create a more informed and robust body of knowledge. This book offers an interdisciplinary approach to research on cybercrime and lays out frameworks for collaboration between the fields. Bringing together international experts, this book explores a range of issues from malicious software and hacking to victimization and fraud. This work also provides direction for policy changes to both cybersecurity and criminal justice practice based on the enhanced understanding of cybercrime that can be derived from integrated research from both the technical and social sciences. The authors demonstrate the breadth of contemporary scholarship as well as identifying key questions that could be addressed in the future or unique methods that could benefit the wider research community. This edited collection will be key reading for academics, researchers, and practitioners in both computer security and law enforcement. This book is also a comprehensive resource for postgraduate and advanced undergraduate students undertaking courses in social and technical studies.

This classic, superbly designed text is perfectly suited for health care professionals, providing all of the essential knowledge needed in one convenient volume. Provides up-to-date, authoritative information on contact lens materials and lens types, treatment in contact lens and tear film complications, and myopia correction and contact lenses for abnormal ocular conditions. Discusses current topics such as miniscleral lenses, keratoconus, corneal cross linking, and paediatric, cosmetic and prosthetic contact lenses. Contains high-quality line diagrams and clinical illustrations to highlight key points in the text. Focuses on the evidence behind contact lens practice, enabling you to make informed choices about the care you give to your patients.

*OpenCV 3 Blueprints* Jan 22 2022 Expand your knowledge of computer vision by building amazing projects with OpenCV 3 About This Book Build computer vision projects to capture high-quality image data, detect and track objects, process the actions of humans or animals, and much more Discover practical and interesting innovations in computer vision while building atop a mature open-source library, OpenCV 3 Familiarize yourself with multiple approaches and theories wherever critical decisions need to be made Who This Book Is For This book is ideal for you if you aspire to build computer vision systems that are smarter, faster, more complex, and more practical than the competition. This is an advanced book intended for those who already have some experience in setting up an OpenCV development environment and building applications with OpenCV. You should be comfortable with computer vision concepts, object-oriented programming, graphics programming, IDEs, and the command line. What You Will Learn Select and configure camera systems to see invisible light, fast motion, and distant objects Build a "camera trap", as used by nature photographers, and process photos to create beautiful effects Develop a facial expression recognition system with various feature extraction techniques and machine learning methods Build a panorama Android application using the OpenCV stitching module in C++ with NDK support Optimize your object detection model, make it rotation invariant, and apply scene-specific constraints to make it faster and more robust Create a person identification and registration system based on biometric properties of that person, such as their fingerprint, iris, and face Fuse data from videos and gyroscopes to stabilize videos shot from your mobile phone and create hyperlapse style videos In Detail Computer vision is becoming accessible to a large audience of software developers who can leverage mature libraries such as OpenCV. However, as they move beyond their first experiments in computer vision, developers may struggle to ensure that their solutions are sufficiently well optimized, well trained, robust, and adaptive in real-world conditions. With sufficient knowledge of OpenCV, these developers will have enough confidence to go about creating projects in the field of computer vision. This book will help you tackle increasingly challenging computer vision problems that you may face in your careers. It makes use of OpenCV 3 to work around some interesting projects. Inside these pages, you will find practical and innovative approaches that are battle-tested in the authors' industry experience and research. Each chapter covers the theory and

practice of multiple complementary approaches so that you will be able to choose wisely in your future projects. You will also gain insights into the architecture and algorithms that underpin OpenCV's functionality. We begin by taking a critical look at inputs in order to decide which kinds of light, cameras, lenses, and image formats are best suited to a given purpose. We proceed to consider the finer aspects of computational photography as we build an automated camera to assist nature photographers. You will gain a deep understanding of some of the most widely applicable and reliable techniques in object detection, feature selection, tracking, and even biometric recognition. We will also build Android projects in which we explore the complexities of camera motion: first in panoramic image stitching and then in video stabilization. By the end of the book, you will have a much richer understanding of imaging, motion, machine learning, and the architecture of computer vision libraries and applications! Style and approach  
This book covers a combination of theory and practice. We examine blueprints for specific projects and

discuss the principles behind these blueprints, in detail.
