Guide to Psychological Assessment with Hispanics Nov 20 2021 This book focuses on diversity, culture, and ethnicity as they relate to psychological assessment of Hispanics. It is a how-to guide for clinicians, researchers, and instructors working with Hispanic clients. Each chapter contains an overview of cultural considerations needed for assessing the Hispanic client followed by a specific exploration of the assessment measures available and the research that has been conducted on these measures with Hispanic participants. An exploration of the strengths and limitations of each assessment measure is included. Considering that ethnocultural minority individuals who are of Hispanic/Latino origin make up the largest ethnocultural minority group in the United States, guidelines for working with this population are a must. Given that a large subset of this percentage is composed of immigrants many of whom do not speak English or who have learned English as a second language, special considerations for effective psychological assessment are neccessary.This book fills a gap in the scientific literature by consolidating the research on psychological assessment with Hispanic samples into one comprehensive volume and providing simple recommendations for the psychological assessment of Hispanic clients. An exploration of the general psychological assessment domains (e.g., personality, intelligence) is included with references to research on the major

assessment measures used in the field. A more specific exploration of psychodiagnostic assessment measures follows, including the assessment of mood disorders, anxiety disorders, sexual dysfunction, psychosis, etc. Several chapters are dedicated to specialized assessment, including neuropsychological assessment, forensic assessment, and school-based assessment, overall creating the most comprehensive, up-to-date, research-based compendium of psychological assessment measures for use with Hispanic clients.

A Comprehensive Guide to Child Psychotherapy and Counseling Jul 17 2021 Christiane Brems, an experienced clinician, supervisor, and educator, presents a metatheoretical yet practical guide to working with children ages 3 to 12 years. She draws heavily on developmental, interpersonal, family systems, and self-psychological schools of thought and integrates the core components of all of these approaches in a clear and concise manner. She stresses the need for intensive assessment to precede conceptualization and treatment planning so that treatment techniques are dictated by the needs of each

child and family. Brems has contoured the third edition to meet the practical needs and expectations of students and practitioners. Divided among four sections, the chapters follow the logical development of clinicians, mirroring the natural flow of work with childrenfrom the practitioners self-exploration, to learning about special aspects of children (such as diversity and development), to awareness about the special needs and demands of children as related to environmental, legal, and ethical issues. Brems prepares clinicians to discover their own personal traits that may facilitate or hinder their work with children. She walks child therapists and counselors through the initial stages of intake, assessment, and conceptualization. The material on assessment instruments is thoroughly updated; discussions refer to the latest versions of instruments, and if new instruments emerged that meet one of the purposes deemed essential to child treatment, they are included. The text contains case examples, each illustrating a specific therapeutic technique.

Immunotherapy Jul 05 2020 The field of immuno-oncology continues to rapidly evolve as new insights to fight and treat cancer emerge. The fourth edition of Immunotherapy provides the most current overview of immuno-oncology in different cancer types and toxicities associated with immunotherapy. While immunotherapy has revolutionized the treatment landscape of several solid malignancies, several challenges still exist. Only a subset of patients derive clinical benefits; some do not respond at all, and others respond initially, only for their disease to progress later. Because these drugs can activate a broad range of immune cells, patients suffer from a unique set of side effects known as immune-related adverse events. As more immunotherapeutic agents are used in the clinic, it is important to provide updates about current and ongoing developments in the field to further research efforts and inform treatment decisions. The fourth edition will have a new focus on strategies to overcome the challenges associated with immunotherapy. Chapters will discuss topics such as

biomarkers of response, resistance mechanisms, role of imaging in predicting immune-related adverse events, and management of immune-related adverse events. Written by leading experts conducting cutting-edge research, readers will gain up-to-date knowledge on the current state and future of immunotherapy.
