IBM z13s Technical Guide May 29 2020 Digital business has been driving the transformation of underlying information technology (IT) infrastructure to be more efficient, secure, adaptive, and integrated. IT must be able to handle the explosive growth of mobile clients and employees. It also must be able to process enormous amounts of data to provide deep and real-time insights to help achieve the greatest business impact. This IBM® Redbooks® publication addresses the new IBM z Systems™ single frame, the IBM z13s server. IBM z Systems servers are the trusted enterprise platform for integrating data, transactions, and insight. A data-centric infrastructure must always be available with a 99.999% or better availability, have flawless data integrity, and be secured from misuse. It needs to be an integrated infrastructure that can support new applications. It also needs to have integrated capabilities that can provide new mobile capabilities with real-time analytics delivered by a secure cloud infrastructure. IBM z13s servers are designed with improved scalability, performance, security, resiliency, availability, and virtualization. The superscalar design allows z13s servers to deliver a record level of capacity over the prior single frame z Systems server. In its maximum configuration, the z13s server is powered by up to 20 client characterizable microprocessors (cores) running at 4.3 GHz. This configuration can run more than 18,000 millions of instructions per second (MIPS) and up to 4 TB of client memory. The IBM z13s Model N20 is estimated to provide up to 100% more total system capacity than the IBM zEnterprise® BC12 Model H13. This book provides information about the IBM z13s server and its functions, features, and associated software support. Greater detail is offered in areas relevant to technical planning. It is intended for systems engineers, consultants, planners, and anyone who wants to understand the IBM z Systems™ functions and plan for their usage. It is not intended as an introduction to mainframes. Readers are expected to be generally familiar with existing IBM z Systems technology and terminology.

IBM zEnterprise 114 Technical Guide Oct 22 2019 The popularity of the  
Internet and the affordability of IT hardware and software have resulted in  
an explosion of applications, architectures, and platforms. Workloads have  
changed. Many applications, including mission-critical ones, are deployed on  
a variety of platforms, and the System z® design has adapted to this change.  
It takes into account a wide range of factors, including compatibility and  
investment protection, to match the IT requirements of an enterprise. This  
IBM® Redbooks® publication discusses the IBM zEnterprise System, an IBM  
scalable mainframe server. IBM is taking a revolutionary approach by  
integrating separate platforms under the well-proven System z hardware  
management capabilities, while extending System z qualities of service to  
those platforms. The zEnterprise System consists of the IBM zEnterprise 114  
central processor complex, the IBM zEnterprise Unified Resource Manager, and  
the IBM zEnterprise BladeCenter® Extension. The z114 is designed with  
improved scalability, performance, security, resiliency, availability, and  
virtualization. The z114 provides up to 18% improvement in uniprocessor  
speed and up to a 12% increase in total system capacity for z/OS®, z/VM®,  
and Linux on System z over the z10TM Business Class (BC). The zBX  
infrastructure works with the z114 to enhance System z virtualization and  
management through an integrated hardware platform that spans mainframe,  
POWER7™, and System x technologies. The federated capacity from multiple  
architectures of the zEnterprise System is managed as a single pool of  
resources, integrating system and workload management across the environment  
through the Unified Resource Manager. This book provides an overview of the  
zEnterprise System and its functions, features, and associated software  
support. Greater detail is offered in areas relevant to technical planning.  
This book is intended for systems engineers, consultants, planners, and  
anyone wanting to understand the zEnterprise System functions and plan for  
their usage. It is not intended as an introduction to mainframes. Readers  
are expected to be generally familiar with existing IBM System z technology  
and terminology.
