Collected Papers Aug 11 2021 This book collects the papers published by A. Borel from 1983 to 1999. About half of them are research papers, written on his own or in collaboration, on various topics pertaining mainly to algebraic or Lie groups, homogeneous spaces, arithmetic groups (L<sub>2</sub>-spectrum, automorphic forms, cohomology and covolumes), L<sub>2</sub>-cohomology of symmetric or locally symmetric spaces, and to the Oppenheim conjecture. Other publications include surveys and personal recollections (of D. Montgomery, Harish-Chandra, and A. Weil), considerations on mathematics in general and several articles of a historical nature: on the School of Mathematics at the Institute for Advanced Study, on N. Bourbaki and on selected aspects of the works of H. Weyl, C. Chevalley, E. Kolchin, J. Leray, and A. Weil. The book concludes with an essay on H. Poincaré and special relativity. Some comments on, and corrections to, a number of papers have also been added.

Recent Developments in the Law of the Sea And China Jul 10 2021 The focus of this book is on current ocean law and policy issues particularly in the region around China. The work will be useful to anyone concerned with law of the sea in general and the evolving attitudes of States near China in particular.

Approximation Algorithms and Semidefinite Programming Jun 28 2020 Semidefinite programs constitute one of the largest classes of optimization problems that can be solved with reasonable efficiency - both in theory and practice. They play a key role in a variety of research areas, such as combinatorial optimization, approximation algorithms, computational complexity, graph theory, geometry, real algebraic geometry and quantum computing. This book is an introduction to selected aspects of semidefinite programming and its use in approximation algorithms. It covers the basics but also a significant amount of recent and more advanced material. There are many computational problems, such as MAXCUT, for which one cannot reasonably expect to obtain an exact solution efficiently, and in such case, one has to settle for approximate solutions. For MAXCUT and its relatives, exciting recent results suggest that semidefinite programming is probably the ultimate tool. Indeed, assuming the Unique Games Conjecture, a plausible but as yet unproven hypothesis, it was shown that for these problems, known algorithms based on semidefinite programming deliver the best possible approximation ratios among all polynomial-time algorithms. This book follows the "semidefinite side" of these developments, presenting some of the main ideas behind approximation algorithms based on semidefinite programming. It develops the basic theory of semidefinite programming, presents one of the known efficient algorithms in detail, and describes the principles of some others. It also includes applications, focusing on approximation algorithms.

Working Paper Mar 26 2020

Technical and Scientific Papers Presented at ... Manitoba Agronomists' Annual Conference Nov 14 2021 A History of Mathematics in the United States and Canada: Volume 1: 1492-1900 Mar 06 2021 This is the first truly comprehensive and thorough history of the development of mathematics and a mathematical community in the United States and Canada. This first volume of the multi-volume work takes the reader from the European encounters with North America in the fifteenth century up to the emergence of a research community the United States in the last quarter of the nineteenth. In the story of the colonial period, particular emphasis is given to several prominent colonial figures—Jefferson, Franklin, and Rittenhouse—and four important early colleges—Harvard, Québec, William & Mary, and Yale. During the first three-quarters of the nineteenth century, mathematics in North America was largely the occupation of scattered individual pioneers: Bowditch, Farrar, Adrain, B. Peirce. This period is given a fuller treatment here than previously in the literature, including the creation of the first PhD programs and attempts to form organizations and found journals. With the founding of Johns Hopkins in 1876 the

American mathematical research community was finally, and firmly, founded. The programs at Hopkins, Chicago, and Clark are detailed as are the influence of major European mathematicians including especially Klein, Hilbert, and Sylvester. Klein's visit to the US and his Evanston Colloquium are extensively detailed. The founding of the American Mathematical Society is thoroughly discussed. David Zitarelli is emeritus Professor of Mathematics at Temple University. A decorated and acclaimed teacher, scholar, and expositor, he is one of the world's leading experts on the development of American mathematics. Author or co-author of over a dozen books, this is his magnum opus—sure to become the leading reference on the topic and essential reading, not just for historians. In clear and compelling prose Zitarelli spins a tale accessible to experts, generalists, and anyone interested in the history of science in North America.

Trial by Fire Jul 22 2022 The first study of the British Expeditionary Force in 1914 to incorporate extensive archival research, this book investigates the ideas and behavior of officers at the beginning of the conflict.

Station Paper Aug 23 2022

Dispersal and Renewal Jan 04 2021 In this volume, dedicated to the memory of Hong Kong University students, faculty and members of the Court who lost their lives as a result of hostilities in the Far East during 1941-1945, we ask what happened to the University during those years of Japanese occupation when there was only the shell of a campus left standing on Pokfulam Road. Though physically non-existent, the idea of the University persisted, as shown by the recollections here of twenty-five contributors, many of whom were students of faculty when war broke out. Their stories of imprisonment or escape, mainly to China, help to capture something of the spirit of those challenging times that eventually led to the re-establishing of the University in 1948 and its remarkable growth since then.

Texas Newspapers, 1813-1939 May 20 2022

Multispace & Multistructure. Neutrosophic Transdisciplinarity (100 Collected Papers of Science) Sep 24 2022 This is an eclectic tome of 100 papers in various fields of sciences, alphabetically listed, such as: astronomy, biology, calculus, chemistry, computer programming codification, economics and business and politics, education and administration, game theory, geometry, graph theory, information fusion, neutrosophic logic and set, non-Euclidean geometry, number theory, paradoxes, philosophy of science, psychology, quantum physics, scientific research methods, and statistics ; containing 800 pages. It was my preoccupation and collaboration as author, co-author, translator, or co-translator, and editor with many scientists from around the world for long time. Many ideas from this book are to be developed and expanded in future explorations.

British Unitarians Against American Slavery, 1833-65 Apr 19 2022 This study of the British Unitarians is the story of this group's thirty-year war against the master sin of the world—American slavery. Focusing on the group known as the Garrisonians, the author examines their racial views, their attitudes toward the Civil War, their relations with the American antislavery movement, and the difficult problem of the relation between religious commitment and social activism.

A History of Mathematics in the United States and Canada Dec 03 2020 This is the first truly comprehensive and thorough history of the development of a mathematical community in the United States and Canada. This second volume starts at the turn of the twentieth century with a mathematical community that is firmly established and traces its growth over the next forty years, at the end of which the American mathematical community is pre-eminent in the world. In the preface to the first volume of this work Zitarelli reveals his animating philosophy, "I find that the human factor lends life and vitality to any subject." History of mathematics, in the Zitarelli conception, is not just a collection of abstract ideas and their development. It is a community of people and practices joining together to understand, perpetuate, and advance those ideas and each other. Telling the story of mathematics means telling the stories of these people: their accomplishments and triumphs; the institutions and structures they built; their interpersonal and scientific interactions; and their failures and shortcomings. One of the most hopeful developments of the period 1900-1941 in American mathematics was the opening of the community to previously excluded populations. Increasing numbers of women were welcomed into mathematics, many of whom—including Anna Pell Wheeler, Olive Hazlett, and Mayme Logsdon—are profiled in these pages. Black mathematicians were often systematically excluded during this period, but, in spite of the obstacles, Elbert Frank Cox, Dudley Woodard, David Blackwell, and others built careers of significant accomplishment that are described here. The effect on the substantial community of European immigrants is detailed through the stories of dozens of individuals. In clear and compelling prose Zitarelli, Dumbaugh, and Kennedy spin a tale accessible to experts, general readers, and anyone interested in the history of science in North America.

The Politics of Justifying Force Aug 19 2019 What are the politics involved in a government justifying its use of military force abroad? What is the role of international law in that discourse? How and why is international law crucial to this process? And what role does the media have in mediating the interaction of international law and politics? This book provides a fresh and engaging answer to these questions. It introduces different actors to the study of international law in this context, in particular highlighting the importance of institutional actors and the role of the media. It takes a theoretical approach, informed by detailed empirical analysis of key case studies, which challenges the traditional distinction between the spheres of 'the international' and 'the domestic' in global affairs, and the role of international law in the making of public policy. The book specifically critiques the idea of the 'politics of justification', which argues that deploying international legal norms to justify

governmental decisions resulting in the use of force necessarily constrains government actions, and leads to fewer instances of military intervention. The politics of justification, on this account, can be seen as a progressive practice, through which international law can become embedded in domestic societies. The book investigates the actors engaged in this justification, and the institutional contexts within which legal justification is articulated, interpreted, and contested. It provides a rich, detailed account of domestic British discourse in the crucial case studies of the Suez Crisis of 1956 and the Iraq War of 2003, making extensive use of archival material, newspaper and television reporting, Parliamentary debates, polling data, personal memoirs, and the declassified material provided to several Public Inquiries, including the Chilcot Inquiry. In light of these sources, it considers the concept of international law as a language and form of communication rather than a set of abstract norms. It argues that a detailed understanding of how that language is deployed, both in private and in public, is essential to gaining a deeper understanding of the role of international law in domestic politics. This book will be illuminating reading for scholars and students the use of force in international law, historians, and media theorists.

*American Legal Education Abroad Nov 21 2019 A critical history of the Americanization of legal education in fourteen countries The second half of the twentieth century witnessed the export of American power—both hard and soft—throughout the world. What role did US cultural and economic imperialism play in legal education? American Legal Education Abroad offers an unprecedented and surprising picture of the history of legal education in fourteen countries beyond the United States. Each study in this book represents a critical history of the Americanization of legal education, reexamining prevailing narratives of exportation, transplantation, and imperialism. Collectively, these studies challenge the conventional wisdom that American ideas and practices have dominated globally. Editors Susan Bartie and David Sandomierski and their contributors suggest that to understand legal education and to respond thoughtfully to the mounting present-day challenges, it is essential to look beyond a particular region and consider not only the ideas behind legal education but also the broader historical, political, and cultural factors that have shaped them. American Legal Education Abroad begins with an important foundational history by leading Harvard Law School historian Bruce Kimball, who explains the factors that created a transportable American legal model, and the book concludes with reflections from two prominent American law professors, Susan Carle and Bob Gordon, whose observations on recent disruptions within US law schools suggest that their influence within the global order of legal education may soon fall into further decline. This book should be considered an invaluable resource for anyone in the field of law.*

*Developing Focus Group Research Oct 21 2019 This book critically examines the potential of, and suggests ways forward in, harnessing a versatile and powerful method of research - focus groups. The book challenges some of the emerging orthodoxies and presents accessible, insightful and reflective discussions about the issues around focus group work. The contributors, an impressive group of experienced researchers from a range of disciplines and traditions, discuss different ways of designing, conducting and analyzing focus group research. They examine sampling strategies; the implications of combining focus groups with other methods; accessing views of 'minority' groups; their contribution to participatory or feminist research; use of software packages; discourse anal*

*Exploring the Mandatory Life Sentence for Murder Apr 26 2020 Murder is often regarded as both the 'ultimate' and a unique crime, and whereas courts are normally given discretion in sentencing offenders, for murder the sentence is mandatory - indeterminate imprisonment. Since the crime and the punishment come as a 'package deal' this book looks at both the legal nature of the offence and at the current operation of the mandatory life sentence. Not only does the book adopt a critical approach, by assessing the strengths and weaknesses of the status quo, it also draws upon comparative material from both common and civil law jurisdictions in an attempt to provide a comprehensive exploration of these issues. The need for public confidence in the criminal justice system is particularly acute in the way it deals with the most serious homicides. In this book the authors report findings from the first systematic exploration of public attitudes to sentencing murder in this or any other common law jurisdiction. The picture of public opinion emerging from this recent large-scale nationwide qualitative and quantitative survey, funded by the Nuffield Foundation, is likely to surprise many, and will be of interest to all jurisdictions where the mandatory life sentence for murder has been questioned.*

*Reforming Juvenile Justice Aug 31 2020 Adolescence is a distinct, yet transient, period of development*

between childhood and adulthood characterized by increased experimentation and risk-taking, a tendency to discount long-term consequences, and heightened sensitivity to peers and other social influences. A key function of adolescence is developing an integrated sense of self, including individualization, separation from parents, and personal identity. Experimentation and novelty-seeking behavior, such as alcohol and drug use, unsafe sex, and reckless driving, are thought to serve a number of adaptive functions despite their risks. Research indicates that for most youth, the period of risky experimentation does not extend beyond adolescence, ceasing as identity becomes settled with maturity. Much adolescent involvement in criminal activity is part of the normal developmental process of identity formation and most adolescents will mature out of these tendencies. Evidence of significant changes in brain structure and function during adolescence strongly suggests that these cognitive tendencies characteristic of adolescents are associated with biological immaturity of the brain and with an imbalance among developing brain systems. This imbalance model implies dual systems: one involved in cognitive and behavioral control and one involved in socio-emotional processes. Accordingly adolescents lack mature capacity for self-regulations because the brain system that influences pleasure-seeking and emotional reactivity develops more rapidly than the brain system that supports self-control. This knowledge of adolescent development has underscored important differences between adults and adolescents with direct bearing on the design and operation of the justice system, raising doubts about the core assumptions driving the criminalization of juvenile justice policy in the late decades of the 20th century. It was in this context that the Office of Juvenile Justice and Delinquency Prevention (OJJDP) asked the National Research Council to convene a committee to conduct a study of juvenile justice reform. The goal of *Reforming Juvenile Justice: A Developmental Approach* was to review recent advances in behavioral and neuroscience research and draw out the implications of this knowledge for juvenile justice reform, to assess the new generation of reform activities occurring in the United States, and to assess the performance of OJJDP in carrying out its statutory mission as well as its potential role in supporting scientifically based reform efforts.

*Myles' Textbook for Midwives E-Book Dec 15 2021* Written by midwives for midwives, *Myles Textbook for Midwives* has been the seminal textbook of midwifery for over 60 years. It offers comprehensive coverage of topics fundamental to 21st midwifery practice. Co-edited for the second time, by internationally renowned midwife educationalists, Professor Jayne E Marshall and Maureen D Raynor from the United Kingdom with a team of contributors from across the midwifery community it retains its clear, accessible writing style. Most chapters provide useful case studies, websites of key organisations and charities for individuals to access further information. Reflective questions at the end of each chapter as well as annotated further reading aid reflective learning and stimulate discussions relating to continuing professional development. The book covers key frameworks that govern midwifery practice, exploring ethical and legal frameworks that are essential to every accountable, autonomous, professional midwife. Includes employer-led models of supervision, vital elements of leadership and clinical governance that supports the provision of high quality maternity services and standards of midwifery practice. The concept of resilience is introduced for the reader to contemplate their personal contribution in creating an environment that is conducive to protecting the wellbeing of themselves and colleagues within the workplace. The text covers the UN 2030 Agenda for Sustainable Development, highlighting the importance of midwives as global citizens with common goals, and together they form a strong global community prepared to challenge social inequalities and take action to help end extreme poverty. Covers designing and implementing high quality midwifery care using evidence, policy and models of care. Highlights why a holistic and evidence-informed approach is necessary to achieve effective care for all. Working examples will help the reader to think critically about their own practice. For this edition several new chapters are introduced covering concealed pregnancy, fear of childbirth (tocophobia), care of the acutely unwell woman and end of life issues including rights of the fetus/neonate and ethical considerations.

*Paradoxes May 28 2020*

*Foundations of Intelligent Systems Oct 13 2021* This book constitutes the proceedings of the 20th International Symposium on Methodologies for Intelligent Systems, ISMIS 2012, held in Macau, China, in December 2012. The 42 regular papers and 11 short papers presented were carefully reviewed and selected from 88 submissions. They are organized in topical sections named: knowledge discovery and data mining; intelligent information systems; text mining and language processing; knowledge representation and integration; music information retrieval; recommender systems; technology intelligence and applications; product configuration; human factors in information retrieval; social recommender systems; and warehousing and OLAPing complex, spatial and spatio-temporal data.

*Sex and the University Jun 09 2021* During the last decade or so, college newspaper sex columns and campus sex magazines have revolutionized student journalism and helped define a new sexual generation. *Sex and the University* explores the celebrity status that student sex columnists and magazine editors have received, the controversies they have caused, and the sexual generation and student journalism revolution they represent. Complete with a "sexicon" of slang, this book also dives into the columns and magazines themselves, sharing for the first time what modern students are saying about their sex and love lives, in their own words.

*ICM-90 Satellite Conference Proceedings Feb 05 2021* The International Conference "Algebraic Geometry and Analytic Geometry, Tokyo 1990" was held at Tokyo Metropolitan University and the Tokyo Training Center of Daihyaku Mutual Life Insurance Co., from August 13 through August 17, 1990, under the co-sponsorship of the Mathematical Society of Japan. It was one of the satellite conferences of ICM90, Kyoto, and approximately 300 participants, including more than 100 from overseas, attended the conference. The academic program was divided into two parts, the morning sessions and the afternoon sessions. The morning

sessions were held at Tokyo Metropolitan University, and two one-hour plenary lectures were delivered every day. The afternoon sessions at the Tokyo Training Center, intended for a more specialized audience, consisted of four separate sub-sessions: Arithmetic Geometry, Algebraic Geometry, Analytic Geometry I and Analytic Geometry II. This book contains papers which grew out of the talks at the conference. The committee in charge of the organization and program consisted of A. Fujiki, K. Kato, T. Katsura, Y. Kawamata, Y. Miyaoka, S. Mori, K. Saito, N. Sasakura, T. Suwa and K. Watanabe. We would like to take this opportunity to thank the many mathematicians and students who cooperated to make the conference possible, especially Professors T. Fukui, S. Ishii, Y. Kitaoka, M. Miyanishi, Y. Namikawa, T. Oda, F. Sakai and T. Shioda for their valuable advice and assistance in organizing this conference. Financial support was mainly provided by personal contributions from Professors M.

New Democratic Processes Jul 30 2020 The author argues that there is a growing gap between the rhetoric and practice at a central government level. An approach which is largely based on a market research approach has limited scope and is an insufficient response to growing problems of apathy. The author proposes a series of practical recommendations for how government can best learn from existing good practice and become more innovative in its approach.

Adaptive and Natural Computing Algorithms Nov 02 2020 The papers in this volume present theoretical insights and report practical applications both for neural networks, genetic algorithms and evolutionary computation. In the field of natural computing, swarm optimization, bioinformatics and computational biology contributions are no less compelling. A wide selection of contributions report applications of neural networks to process engineering, robotics and control. Contributions also abound in the field of evolutionary computation particularly in combinatorial and optimization problems. Many papers are dedicated to machine learning and heuristics, hybrid intelligent systems and soft computing applications. Some papers are devoted to quantum computation. In addition, kernel based algorithms, able to solve tasks other than classification, represent a revolution in pattern recognition bridging existing gaps. Further topics are intelligent signal processing and computer vision.

Selected Papers of Takeyuki Hida Apr 07 2021 The topics discussed in this book can be classified into three parts: (i) Gaussian processes. The most general and in fact final representation theory of Gaussian processes is included in this book. This theory is still referred to often and its developments are discussed. (ii) White noise analysis. This book includes the notes of the series of lectures delivered in 1975 at Carleton University in Ottawa. They describe the very original idea of introducing the notion of generalized Brownian functionals (nowadays called "generalized white noise functionals", and sometimes "Hida distribution". (iii) Variational calculus for random fields. This topic will certainly represent one of the driving research lines for probability theory in the next century, as can be seen from several papers in this volume. Contents: General Theory of White Noise Functionals Gaussian and Other Processes Infinite Dimensional Harmonic Analysis and Rotation Group Quantum Theory Feynman Integrals and Random Fields Variational Calculus and Random Fields Application to Biology Readership: Graduate students and researchers in the fields of probability theory, functional analysis, statistics and theoretical physics. Keywords: White Noise; Gaussian; Brownian Motion; Lévy Process; Canonical Representation; Stochastic Infinitesimal Equation; Generalized Functional; Innovation; Multiple Markov; Random Field Reviews: "This collection of papers is a tribute to one of the great researchers within stochastic analysis, Takeyuki Hida ... An interesting appendix, however, is the collection of remarks at the end of the book ... These remarks serve to put the various papers into perspective, and represent a valuable contribution." Mathematical Reviews

Modelling and Simulation in Management Sciences Oct 01 2020 This book includes a collection of selected papers presented at the International Conference on Modelling and Simulation in Engineering, Economics, and Management, held at the Faculty of Economics and Business at the University of Girona, Spain, 28-29 June 2018. The conference was organized by the Association for the Advancement of Modelling and Simulation Techniques in Enterprises (AMSE) and the University of Girona with the aim of promoting research in the field of modelling, simulation and management science. This book presents original research studies related to fuzzy logic, soft computing and uncertainty, as well as a number of papers in the field of bibliometrics in social sciences. Presenting new advances in these areas, with a special focus on management, economics and social sciences. It is of great interest to researchers and Ph.D. students working in the field of fuzzy logic, soft computing, uncertainty and bibliometrics.
